Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claims 15, 16, 18 and 28 are presented for examination.

Applicant's amendment filed December 7, 2005 has been received and entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 16, 18 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ninkov (6,844,369 B2) in view of Nitsas (6,106,838)

Ninkov teaches a pesticidal composition comprising (a) carvacrol, and (b) thymol, wherein the ratio weight of carvacrol to the weight of thymol is about 50:1 to about 5:1 (see column 17, claim 12). Note applicant's weight ratio of carvacrol to thymol is from 2:3 to 4:1 falls within the Ninkov's weight ratios range. Note particularly column 3, lines 7-16 states the instant pesticidal composition is effective against microorganisms, including but not limited to bacteria, viruses and parasites. Clearly, the cited reference teaches the instant pesticidal composition is effective against a broad range of bacteria that may include *Treponema*. However, the secondary reference, Nitsas, teaches antimicrobial compositions comprising carvacrol and thymol were effective to treat diseases caused by pathogenic microorganisms of the abdominal tract, the same as applicant's use for treatment of swine dysentery

(the inflammation of the abdominal and intestinal tract of swine caused by Treponema).

The instant invention differs from the cited references in that the cited references do not teach the applicant's preferred individual amounts of ppm of carvacrol and thymol in the composition in claims 15 and 16. However, to determine individual amounts of each component of the instant composition having optimum therapeutic index is well within the level of one having ordinary skill in the art, and the artisan would have been motivated to determine optimum amounts to get the maximum effect of each component.

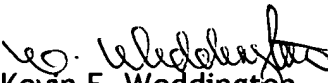

Claims 15, 16, 18 and 28 are not allowed.

The remaining references listed on the enclosed PTO-892 are cited to show the state of the art.
